EXPERIMENT

Title

NUMBER OF TOYS

Description

Akshay has a number of toys and he decided to donate some of them to an NGO. After the donation, he still has some toys left. Write a program to help Akshay to determine the number of remaining toys.

Example:

Input: 50 45
Output: The remaining number of toys = 5

Input: 60 6
Output: The remaining number of toys = 54

Source Code:

```python
# Input: total number of toys and number of donated toys
total_toys, donated_toys = map(int, input().split())

# Calculate remaining toys
remaining_toys = total_toys - donated_toys

# Output the result
print(f"The remaining number of toys = {remaining_toys}")
```

RESULT

5 / 5 Test Cases Passed | 100 %
